Methodological notes

The source of data is the quarterly household budget survey. It is sample survey. The sample used for the survey is a random sample.

A regular household are two or more persons who live in one dwelling or part of a dwelling, having their meals together and having a common budget irrespective of the fact whether they are relatives. A household is also one person living alone, having meals separately and having his/her separate budget. Institutional households are not studied by the household budgets survey.

The main indicators for income, expenditure and consumption are estimated quarterly and annual as average values and relative share.

Household income in cash and kind includes all receipts of household members from: wages and salaries, pensions, entrepreneurship, unemployment benefits, social benefits, etc. Other regular or irregular transfers from other households and property sale are also included.

Household expenditure includes expenditure for food, beverages, tobacco, housing (water, electricity, heating, furnishing and maintenance), transport, communications, health, taxes, social insurance contributions, etc.

Consumption average per household member includes the quantities of foods and beverages consumed at home. The catering data are not included.

More information on the household budget survey and its results could be found on NSI website under the heading of Households Income and Expenditure.
