

## CONSTRUCTION PRODUCTION INDICES IN OCTOBER 2016<sup>1, 2</sup>

According to the preliminary data, in October 2016 the index of production in section 'Construction' calculated on the base of seasonally adjusted data<sup>3</sup> was 2.0% below the level of the previous month (Table 2).

In October 2016 working day adjusted data<sup>4</sup> showed a decrease by 14.0% in the construction production, compared to the same month of 2015 (Table 4).

**Figure 1. Construction Production Indices (2010 = 100)**

<sup>1</sup> Data for October 2016 are preliminary.

<sup>2</sup> The monthly indices show the short-term changes in the construction production between two comparable periods. This information can be used to analyse the current state of the construction activity in the country, as well as short-term forecast for its future development. The indices are calculated on the base of information on hours worked in the construction. The data are collected with monthly sample survey, which includes construction enterprises, which production exceeds 75% of the total production in construction. Construction Production Indices are calculated on the base 2010 = 100.

<sup>3</sup> Seasonal adjustment is a statistical method which eliminates the seasonal component of time series.

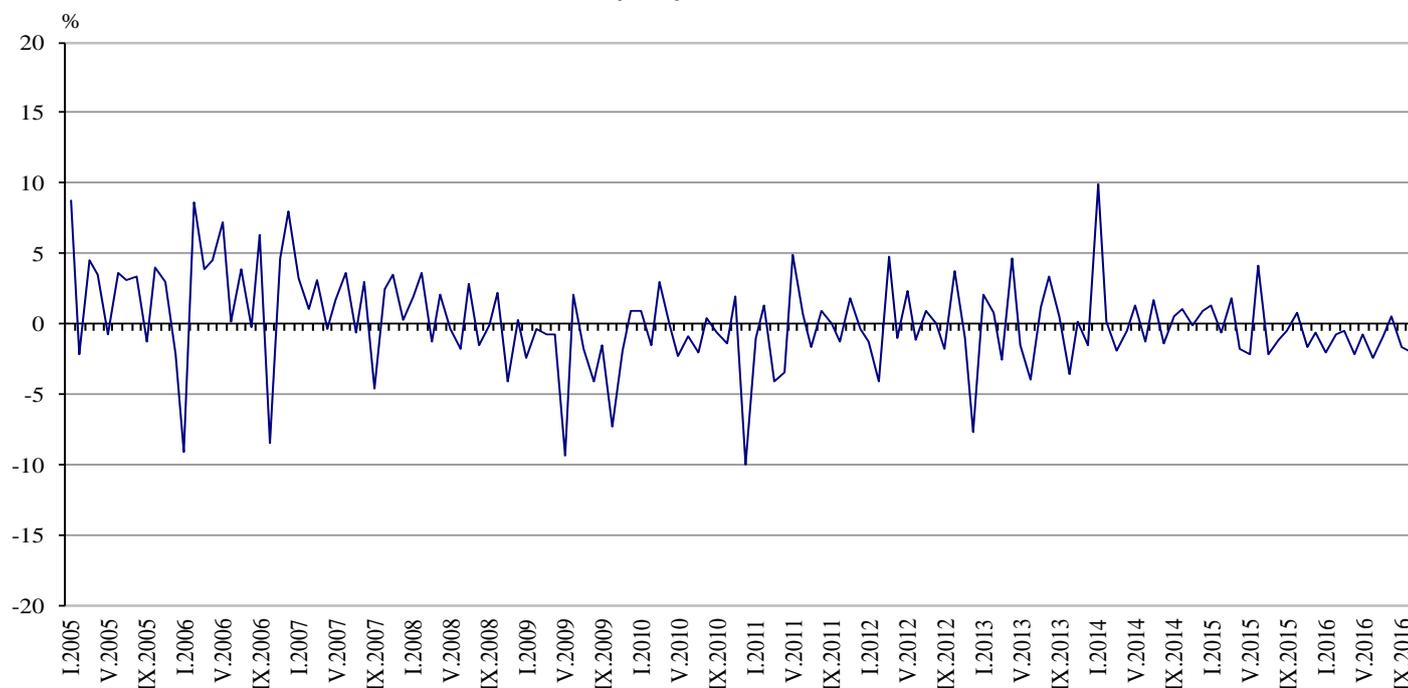

<sup>4</sup> Working day adjustment is an adjustment for variations in monthly data, caused by calendar effects, different number of calendar and working days in the months, national holidays and outliers (for example the presence of more non-working days in May could contribute to the decline in the production in some activities).

## Monthly changes

In October 2016 the construction production, calculated from the seasonally adjusted data, was below the level of the previous month. Index of production of building construction fell by 3.3% and the production of civil engineering - by 0.6% (Table 2).

### Annual changes

On an annual basis in October 2016, the decrease of production in construction, calculated from working day adjusted data, was determined from the negative rate as well as in the building construction, where the drop was by 14.6% and in the civil engineering - decline by 13.3% (Table 4).
