

## **METHODOLOGICAL NOTES**

### **Share of renewable energy in fuel consumption of transport**

Indicator is calculated percentage ratio of:

- Energy from renewable sources consumed in transport, defined as a sum of the following fuels/energies: compliant biofuels (liquid and gaseous), renewable electricity, geothermal energy, solar thermal energy, renewable municipal waste, solid biofuels, hydrogen of renewable origin, synthetic fuels of renewable origin, and
- Total amount of energy consumed in transport - only motor gasoline, diesel, biofuels consumed in road and rail transport, and electricity for transport.
