

METHODOLOGICAL NOTES

Share of renewable energy in fuel consumption of transport

Indicator is calculated according to the requirements of the Directive 2009/28/EC on the promotion of the use of energy from renewable sources (for the data from 2004 to the first six months of 2021), amended by the Directive (EC) 2018/2001 (for the data from the second six months of 2021 onwards), and represents a percentage ratio of:

- Energy from renewable sources consumed in transport, defined as a sum of the following fuels/energies: compliant biofuels (liquid and gaseous), renewable electricity and other forms of renewable energy with reported consumption in the transport sector (geothermal energy, solar thermal energy, renewable municipal waste, solid biofuels, hydrogen of renewable origin and synthetic fuels of renewable origin), and
- Total amount of energy consumed in transport, including only: motor gasoline, diesel, biofuels, electricity (consumed in road and rail transport), natural gas, renewable liquid and gaseous transport fuels of non-biological origin and recycled carbon fuels, used in transport.
