## Methodological notes

The Labour Cost Index is a short-term indicator measuring the quarterly development of hourly labour costs incurred by employers as a result of engaging the labour workforce. The Quarterly Survey on employees, hours worked, wages and salaries and other expenditures paid by the employer is the main source used for the labour cost index data calculation.

**The Labour Cost Index (LCI)** is defined as a Laspeyres index of labour costs per hour worked. Since the first quarter of 2019, it has been calculated as a breakdown by economic activities at a section level according to the new NACE Rev. 2 classification and with the reference year 2016 = 100. Indices are based on Regulation (EC) No. 450/2003 of the European Parliament and of the Council according to which requirements Labour Costs Indices shall be provided separately for the following three labour costs categories:

**Total labour costs (TOT)**, which include wages and salaries paid by the employer in cash or in kind, employers' actual and imputed social contributions plus taxes, regarded as labour costs;

**Wage and salary costs (WAG)** cover wages and salaries paid in cash or in kind;

**Labour costs other than wages and salaries (OTH - non-wage costs)** include the employers' actual and imputed social contributions plus taxes, regarded as labour costs.

Since the second quarter of 2020, the amounts received under government measures to support employers' labour costs are excluded.
