

Table 3

RELATIVE FREQUENCIES OF TWO DAILY PATTERNS

Patterns	f	Relative f	Rank Order
00	38	0.038	10
01	32	0.032	17
0-1	20	0.020	25
02	26	0.026	20
0-2	48	0.049	7
10	33	0.033	16
-10	21	0.021	23
11	55	0.056	5
-11	36	0.036	12
1-1	34	0.034	14
-1-1	20	0.020	24
12	57	0.058	4
-12	21	0.021	22
1-2	37	0.037	11
-1-2	32	0.032	18
20	32	0.032	19
-20	39	0.039	9
21	58	0.059	3
-21	48	0.049	8
2-1	21	0.021	21
-2-1	35	0.035	13
22	91	0.092	1
-22	52	0.052	6
2-2	33	0.033	15
-2-2	69	0.070	2
Total	988		

Also a similar result for the patterns $P(-22) = 0.052$ and $P(2-2) = 0.033$ can be reached from Table 3. Using 5% significant level, $P(-22)$ was found significantly higher than $P(2-2)$. This means that the ratio of patterns "from down to top" was significantly higher than the ratio of the patterns "from top to down".
